

The face of imagination.

How to succeed in a complex world? It takes imagination.

And imagination is blooming at the Technion, one of the world's preeminent science and technology universities. You can see it in the face of scientist Karl Skorecki. His work with stem cells is advancing tumor-shrinking treatments. And his studies on population genetics will help tailor new therapeutics – like the search for a genetic cause of kidney disease in people of African heritage. Dr. Skorecki's pioneering work in medicine is just part of many projects at the Technion, from the search for alternative energy to anti-terror technologies. All born of imagination, at the Technion – a hotbed of discovery that's contributing to Israel's leadership in science, technology and medicine.

Technion: The *Imagination* of Israel.

Providing critical support to the Technion-Israel Institute of Technology.
